

Building Cyber-Aware Nations Securing Unique Identities

Strong Global Presence | Market Leader in Singapore

GlobalSign is one of the world's leading and most deeply rooted Certificate Authorities. Thousands of global enterprises rely on our PKI and identity services to enable their e-services, reduce management costs, and secure mission-critical workflows.

A well-established digital identity and security solutions enterprise all over the world, GlobalSign has long entrenched our local commitment to the all-important Singapore market. **Since 2010, GlobalSign has been enabling businesses, large enterprises, cloud-based service providers, and IoT innovators** to secure online communications, manage voluminous verified digital identities, and automate authentication and encryption. In Singapore, our market share covers top industries such as information technology, business consultancy, banking and financial services, government agencies, education, healthcare, and telecommunications.

GlobalSign is committed towards transforming Singapore into a smart nation through collaborating with different industry leaders and government entities.

- ✔ SafeNet high security solutions for the protection of digital identities
- ✔ Online Trust Alliance (OTA) member

SSL/TLS for Websites

Your website visitors trust the padlock.

An SSL/TLS certificate prevents your websites from getting breached and confidential information from being accessed by any third party. Our certificate helps to increase customer trust.

Secures data transmitted to and from your website

Lets visitors know the website is legitimate

Improves your website's SEO

Which SSL/TLS is ideal for your website?

	BENEFITS	IDEAL FOR
Domain Validated (DV)	Issues reliable base-level encryption within minutes	Blogs and websites that do not collect personal data
Organisation Validated (OV)	Verifies and displays the identity of the organisation	Corporations, government, and entities that need an extra layer of trust and security for visitors
Extended Validated (EV)	Establishes trust and secure transactions with the highest class of SSL available today	E-commerce, large scale corporations, and banks
Wildcard	Secures an unlimited number of subdomains under one certificate, with a one-time verification process	Websites with more than one subdomain
Multi-Domain	Secures all domains and subdomains under one certificate, with a one-time verification process	Websites with multiple domains

Why Our SSL/TLS?

- ✔ Simplifies SSL management with a free Certificate Inventory Tool (CIT)
- ✔ Speeds up OCSP protocol handling for faster website speed*
- ✔ Complies with industry best practices regarding encryption levels
- ✔ Verifies organisational details
- ✔ Provides USD 1.5M (EV) and 1.25M (OV) underwritten liability

* Based on GlobalSign internal tests, speed may vary depending on location and network provider.

GMO Sign for Digital and Electronic Signing Management

This is your all-in-one document signing solution.

A seamless, cloud-based solution for applying digital signatures across the enterprise.

Digital Signatures

Digital certificate signed into one unique "fingerprint"

Electronic Signatures

eIDAS-compliant advanced electronic signatures

Simplify End-to-End Document Signing

Everything You Need in a Single Platform

- ✓ Fully managed keys
- ✓ User group and folder access management
- ✓ Reusable templates
- ✓ Bulk sending
- ✓ Timestamping and long-term validation
- ✓ Customisable signatures and workflows

IDEAL FOR

- ✓ **Contracts with business partners**
 - › Reduces 80% of man-hours in contracting processes
- ✓ **Intergroup transactions and signing needs**
 - › Cuts contract signing time from a few weeks to 3 days
- ✓ **High-volume document and contract signing**
 - › Reduces time to conclude and collect contracts from 1.5 months to 3 days
- ✓ **Collection of application and inspection forms**
 - › Reduces time for collection of application and inspection forms from 2 weeks to 1 day

Adobe Approved Trust List (AATL) for Document Signing

An AATL certificate creates trustworthy digital signatures through Adobe Acrobat or Adobe Reader software.

You can save time and resources with document signing certificates for Adobe AATL, verified by a trusted organisation.

Secures PDF and MS Office files

Meets compliance requirements on digital signatures

Assures document authenticity, integrity, and authorship

Prevents tampering

Adds timestamping

USB Token

Ideal for low volume signature needs

Hardware Security Module (HSM)

Ideal for organisations looking to integrate with an internally developed, or off-the-shelf automated document application

Auto Enrollment Gateway (AEG) for Certificate Provisioning and Management

It has never been easier to enroll, provide for, and install digital certificates across your organisation – regardless of OS or platform.

AEG is a fully automated, managed PKI solution for simple and seamless certificate provisioning and management.

Outsources PKI management to a trusted third-party Certificate Authority (CA)

Reduces total cost of ownership for PKI by as much as 50%

Manages security and CA operations

Meets service level agreements (SLAs) and compliance audits

Supports mixed environments, various use cases, and public or private trust models

Pre-Designed Certificate Templates which Support a Range of Use Cases

SSL/TLS Certificates

Issue certificates to domain-joined servers via Active Directory integration or Linux servers via ACME protocol.

Microsoft Office Document Signing

Replace paper-based workflows and enable electronic workflows with digital signatures for Microsoft Office documents.

Secure Email (S/MIME)

Encrypt email communications and mitigate phishing threats by digitally signing emails.

User, Machine, and Mobile Authentication

Replace passwords and mitigate the risk of rogue machines accessing your networks. Authenticate mobile devices for email encryption as well as signing, in addition to authentication of emails, VPNs, and Wi-Fi networks.
