What is **PDPA**?

The **Personal Data Protection Act**, or PDPA, provides a baseline protection standard for personal data in Singapore. It comprises various requirements governing personal data collection, use, disclosure, and care. Financial penalties may be imposed on businesses that breach PDPA.

Who are at **high risk** of PDPA Breaches?

```
              SMEs
    ┌───────────┼───────────┐
  Retail     Startups    Professional
                          Services
```
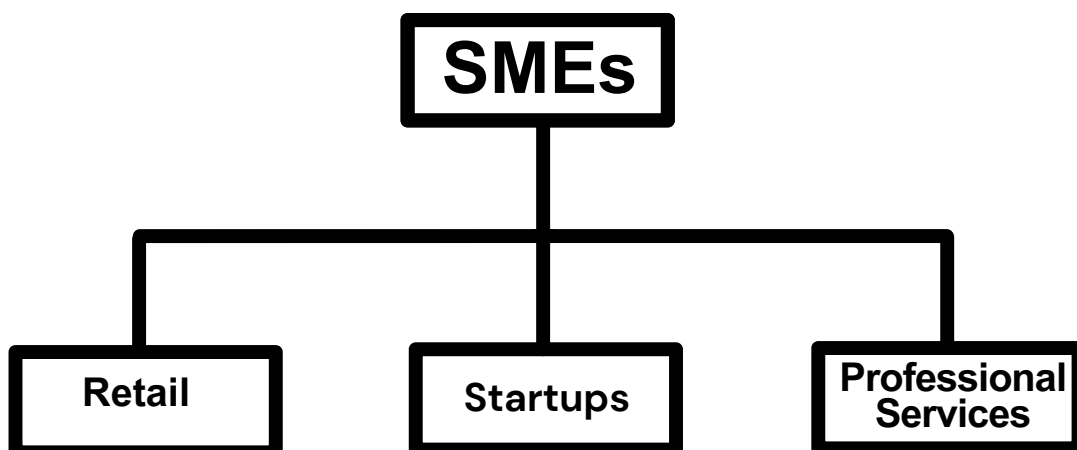

⚠️ **SMEs are targeted for data breaches because they often lack advanced cybersecurity measures. Despite their size, SMEs possess <u>valuable data</u>, making them lucrative targets for cybercriminals.**

Why do you need PDPA protection?

SMEs need PDPA protection to safeguard sensitive customer and business data, which, if breached, can lead to severe financial losses and reputational damage. Compliance with PDPA also ensures that SMEs build trust with their customers by demonstrating a commitment to data privacy and security.
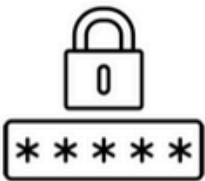

90% of cyberattacks are due to stolen or compromised credentials

About Asiacloud

In operations since 1994, we are a managed cybersecurity service provider and we protect your patient data, computing devices and email security.

Asiacloud Singapore is certified with CSA Cybersecurity and ISO 27001, maintaining international standard for informational security.

How does this solution benefit your business

1 It ensures your patient data are secured and inaccessible to unauthorised access.

2 It secures and encrypt your computing devices that access, view, edit and process any confidential data.

3 It protects your email accounts from phishing mails. This reduces the possibility of your staff clicking on a malicious link and revealing your credentials to your computing devices

AC360 DataSecure

Having seen SME business owners struggle to handle and understand cybersecurity risks arising from computing devices and a lack of security awareness training, we developed AC360 DataSecure specifically for SME business owners in Singapore.

Now, SME business owners can detect threats ahead to reduce the likelihood of losing important data, and at the same time remain compliant to PDPA regulatory.
