BeSecurity Pte Ltd (Besecurity) was established in 2012 as a subsidiary of Beyond Security Inc, an Israeli cyber security company based in the US, until it was divested in 2021 when its holding company was acquired by Fortra Inc. in the USA.

Besecurity's clients operate in the Asian Pacific region covering all countries in ASEAN, Taiwan, Hong Kong, Korea, Japan, Australia, NZ and India. It is licensed by the Singapore Cyber Security Regulations Office, under the Cybersecurity Act 2018, to operate and manage security operations centres (SOC) offering cyber threat monitoring services and to conduct and provide vulnerability assessment and penetration testing services (VAPT) in Singapore. Its clientele base covers government agencies, financial institutions, MNCs and SMEs in the Asian Pacific region.

The company as a Cyber Security outfit specialized in providing solutions and services to find known and unknown vulnerabilities in computer networks and applications. Beside these services, Besecurity is an outsourcing partner of Stratica Australia to conduct IT audits under the Payment Card Industry Data Security Standards (PCI DSS) under the Qualified Security Assessor (PCI-QSA) programs and digital forensics investigations as PCI Forensic Investigator (PFI) programs.

Its information security and cyber security solutions portfolio are designed to find security weaknesses from coding, validation, integration testing and production, activities found in the Secure Software Development Lifecycle as depicted below:

Besecurity adopts industry best practices and relevant cyber security frameworks such as NIST and PCI DSS to provide these licensed services as a trusted partner to ensure its customers' information and cyber security.

In 2022, Besecurity entered into the cyber defense business offering a range of Invisiron's network security control solutions to help identify, detect, protect, and respond to cyber threats faced by SMEs, MNCs and government agencies in the region. What differentiates Invisiron inline security appliances from its competing products is its own harvested Cyber Threat Intelligence (CTI) feed consolidating

# Company Profile

---

other CTI feeds from global players into its product line. Invision's sourced CTI feeds are **Asia focused cyber threat intelligence** not identified by global players of CTI. This provides a competitive advantage over US and European centric cyber defense solutions to help prevent and mitigate malicious attacks orchestrated by threat actors from the Asia Pacific region.
