

Introduction

Founded in 2007, SecureAX made corporate cloud IT solutions affordable to any company that wishes to deploy reliable and fully automated solutions with complete access, control, security, and scalability.

We provide enterprise-grade cloud solution to businesses of all sizes within South East Asia, particularly in areas of:

- **Managed Multi-Cloud Services:** Fully Managed Public/Private Cloud Servers, Disaster Recovery & Web Email Hosting Services
- **Cybersecurity Services:** Managed Security Operations Centre (SOC), Vulnerability Assessment & Penetration Testing (VAPT), Email Security Gateway, Phishing Email Assessment & Website Security Protection.

Managed Multi-Cloud Services

The SecureAX Managed Multi-Cloud Services is a holistic managed services coverage for all public, private and on-premise infrastructure deployments. We help our customers manage their on-premise infrastructure & server room, Tier III & IV datacentre deployments, Amazon Web Services (AWS), Microsoft Azure and Google Cloud services.

Key Benefits:

- Outsource patch management, monitoring & security hardening on infrastructure
- Complete insights and overview of your entire on-premise & cloud infrastructure
- Full control over scalability and infrastructure cost

Servers & Hypervisors Management

Let us manage your servers & hypervisors for you. We will perform monitoring and patch management for your servers & hypervisors.

Storage Management

Let us manage your office storage systems for you. We will perform monitoring and firmware patch management against known vulnerabilities of your storage systems.

Active Directory & Exchange Management

Let us manage your Active Directory (AD) and Microsoft Exchange Server for you. We can help you manage your staff authentication securely and systematically for every onboarding of new hire or departure of staff.

Endpoint Management

Let us help you secure your endpoint devices for you. We will develop and implement endpoint policies and help you with system updates, protection from malicious attack detections and managing system vulnerabilities.

Backup Management

Let us help you protect your data via backup management. We will perform backup and retention policies that meet your business needs.

Cybersecurity Services

The SecureAX Cybersecurity services is suitable for enhancing the security for all public, private and on-premise infrastructure deployments. Our cybersecurity offerings include Managed Security Operations Centre (SOC) and Vulnerability Assessment & Penetration Testing (VAPT) both of which are licenced by the CSRO Singapore. Our CREST-certified pentesters help you discover vulnerabilities within your IT environment, share actionable insights with you, to ensure compliance with industry standards. Our holistic cloud & cybersecurity solutions help you focus on your business while we protect your critical IT infrastructure.

Managed Security Operations Centre (SOC)

Our SOC eliminates your struggle to hire and retain experienced professionals for critical 24x7 security operations. Our team of experts ensures you have the coverage you need at all times, while reducing costs.

Vulnerability Assessment & Penetration Testing (VAPT)

Our qualified penetration tester use the Open Web Application Security Project (OWASP) Top Ten (web application attack), ISECOM' s Open - Source Security Testing Methodology Manual (OSSTMM), PCI-DSS, MAS-TRM, IM8, to name a few, to conduct the VAPT in full compliance to the international standards

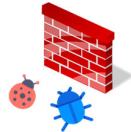

Email Security Gateway

Our Email Security Gateway protects mailboxes from all sorts of spam or malicious email, emails containing viruses or malware, phishing email, Business Email Compromise (BEC) Protection and all emerging email threats!

Phishing Email Assessment

Our Phishing Email Assessment helps minimise BEC risk within your organisation! This service covers three broad scopes :- Identifying & Targeting A Scenario, Conducting Phishing Simulation Email, and Providing Awareness Training to improve cybersecurity awareness within your company.

Website Security Protection

Our Website Security Protection includes Web Application Firewall (WAF), daily malware & vulnerability scan, malware removal, file change monitoring, network port scan, website reputation monitoring and website blacklist monitoring
