Locations

Ability to Execute

Continent 8 is a full service, 24x7x365, Managed Security Solution Provider (MSSP) and Governance, Risk, & Compliance (GRC) professional services organization. Continent 8's goal is to remove the complexity of security through operationalizing people, process and technology into easy to consume, easy to use security solutions. Continent 8's strategy is to provide our partners and customers with effective and cost-attractive information risk management solutions by helping identify, reduce, and manage risk that might impact your organization's revenues, reputation and regulatory compliance. The combination of Continent 8's human support element and In-the-Cloud (ITC) Security Services Platform, allows our customers to focus on managing and growing their businesses, while we protect their business.

Continent 8 directly employs varied and diverse resources worldwide. Our management team has on average over 120 man-years of government and corporate experiences within the CII, Financial, Gaming and IT Security fields. We feel that we offer a stable, challenging and learning environment for all of our employees at every level, achieving an enviable attrition rate of less than 5% annually. Continent 8 has its primary SOC location in Ashburn, VA USA and relies on its 90+ POPS/connect locations for distributed monitoring and analysis.

- Government Agencies (NDAs in force, not able to provide specifics)

Brian "B2" Borysewich
Chief Information & Security Officer

Brian has been a Computer and Communications Security Consultant for **over 46 years**. He has worked as a Security Consultant to Defense, Federal Agencies, Financial Institutions, Communications Companies, Utility Companies and more. His passion is Cyber and Computing Security but has been also been an arms dealer and an explosives expert bringing perspectives not found in the typical "computer guy".

Brian spent 15 years within Federal Agencies and then transitioned to the "Blackhat" Hacker community, because he wanted to see how the underworld operates. He was in the Deepweb and Darkweb world for many years hacking computers, networks, communication systems and infiltrating governments.

Brian resurfaced from the Deepweb and has now become a "Grayhat". He has been evangelizing cybersecurity and its mitigation to governments, financial organizations and countries around the world on how to protect themselves against hackers and those syndicates wishing to do harm or exploit data and information.

Brian has spent the last 20 plus years working for companies like PayPal, American Express, HSBC, Wells Fargo, Charles Schwab and countless utility companies. Brian uses all he his experiences and expertise in cybersecurity to do "good" with it. His principal goal now is to bring awareness to companies and governments on what the risks really are, and not what is being reported in the news and published reports.

Once asked why he has "B2" as his nickname. His answer is, "like the stealth bomber, you will never see or hear me until it is too late".

B2 has done numerous Vulnerability Assessments in various Sectors for more than 15 years:

1. Sectoral Assessment for an ASEAN Government Administration
2. Risk, Security Assessment for an ASEAN Bank with hundreds of branches
3. Table Top Exercises for banks, retail group, defence agencies (US), City Admin (Canada).
4. Deep knowledge of Government, Financial, Utilities, and Gaming systems
