

Products

# Leukocyte

Protect your enterprise servers with Leukocyte, the adaptive server security protection agent from Numen Cyber. Leukocyte's adaptive plug-in engine and closed-loop security protection provide comprehensive defense against cyber attacks, ensuring all assets are covered. Trust Leukocyte to keep your servers secure.

### Features

- Closed-Loop Security Process
- Real-time All-Round Monitoring
- Rapid Vulnerability Discovery
- Unified Management & Control
- Windows Active Directory Protection
- Ransomware Virus Suppression

# ImmunX

A WEB3 security product that performs 24/7 monitoring, real-time security detection, and attack blocking & interception for WEB3 projects on the public chain.

### Features

- Real-time WEB3 Threat Detection
- Covering Multiple Ecosystems
- Customized detection rules
- Security Incident Response & Analysis
- Timely alert Notification
- Attack Block and Intercept
- Situational Awareness
- WEB3 Threat Intelligence

### Functions

#### Tx Security Situation Awareness

- Kown Your Tx (KYT)
- Mempool simulation
- Sensors IDE & marketplace

#### Threats Detector

- Detect Contract's vulnerability
- Detect Malware/phishing/scam
- Detect attack on website
- Detect IDE & marketplace

#### Active Defender

- Auto-interruption
- Contracts firewall
- Wallet firewall

## Security Solutions Provider

Secure your digital assets with our WEB3 Security Solutions. Our cybersecurity experts provides Smart Contract, Public Chain, Crypto Wallet, and Exchange Security Audits, as well as real-time threat detection and intelligence to keep you one step ahead of cyber attacks.

# WEB3 Security

## Service

Secure your WEB3 assets with our skilled Blockchain Security Researchers. Our auditing services for Blockchain Exchanges, Crypto Wallets, Smart Contracts, and Public Blockchains provide expert security analysis, ensuring your assets are fully protected.

### Exchange Security

- Exchange Security Audit
- Security Governance
- Security Awareness
- Incident Response
- Red Teaming

### Smart Contract

- DeFi Security
- NFT Security
- Economic Model
- Token Transfer
- DApp Security Audit
- Business Logic Security

### Wallet Security

- Wallet Application
- Cryptographic
- Web Front-End
- System Configuration
- Private Key/Mnemonic

### Chain Security

- API Security Testing
- Chain Protocol Security
- Business Logic Security
- Virtual Machine Security
- Cryptographic Sign
- Security
- Accounting &
- Transaction Model

### Crypto Tracing & Forensic

- Tracing Digital Assets
- Identify Perpetrators
- Locate Assets

### Web3 Threat Intelligence

- Predict & Assess Risk
- Hardening System Defenses
- Enhance Detection
- Improve Response Time

### AML

### KYC

# Attack Simulations

## Service

### Vulnerability Assessment

Automatic vulnerability identification and manual verification, proactively addresses security concerns and reduces risks.

### VAPT Coverage

- Web App & API
- Infrastructure
- Mobile App & AP
- Cloud Platform
- IoT Product
- Internal Network

### Penetration Testing

Our white-hat hackers simulate real-world hacking behaviours to identify exploitable vulnerabilities.

### Red Teaming

The Red Team tests detection and response capabilities by mimicking a malicious hacker attempting to access sensitive information, identifying potential weaknesses before exploitation.

# Security Consulting

### Software Security

- Source Code Review
- Mobile Security
- Security Testing
- Safe Custody

### Digital Forensics & Incident Response (DFIR)

To prepare for successful incident management, our Numen Cyber Labs team has developed a set of checklist/playbooks for each step, using a wide variety of commercial and open source DFIR toolkits, threat intelligence data sources and others.
