

CYBER DEFENCE SERVICES

NEC Managed Services

Protect your organisation from cyberattacks with NEC's extensive suite of security services and solutions

Companies are becoming increasingly susceptible to cyberattacks due to the growing reliance on digital technology and the inadequate cybersecurity knowledge of their employees. Are you equipped with skilled IT Professionals to tackle security incidents before they even happen?

Building A Secure Business Fortress

MANAGED SECURITY OPERATIONS CENTRE (SOC)

NEC has a mature framework in cybersecurity, with Advanced Security Monitoring system in our Advanced Response Centre (ARC). This system scrutinises your entire network, including all types of endpoints, allowing us to detect and prevent complex cyberattacks before they occur. NEC's SOC and monitoring and penetration test are certified and acknowledged by CSA Singapore.

Security Monitoring / Managed Defence

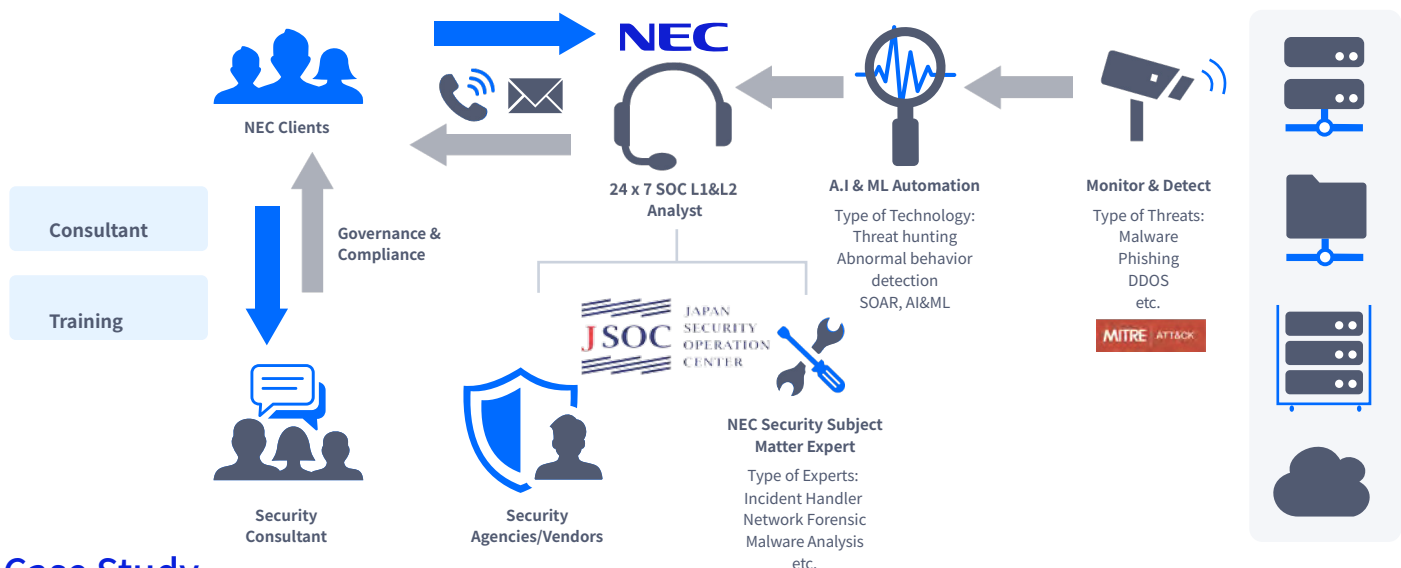

- Log Management
- Website Defacement Monitoring
- Threat Hunting
- Improvement
- 1st Incident Response
- EDR Monitoring / Eradication
- Security Posture Improvement

Security Monitoring / Managed Defence

Threat Detection and Response

Our ARC operates round-the-clock, ensuring continuous monitoring and protection against cyber threats. This eliminates the need for an organisation to maintain an in-house SOC, which can be costly and resource-intensive.

Case Study

Customer is an organisation that plans trade events which bring together industry leaders to share ideas and influence decisions that matter.

Why They Engage With NEC

Customer engaged NEC for cybersecurity consultation and services to comply with governance requirements.

Cybersecurity is important for protecting an organisation's IT infrastructure and management, and for ensuring regulatory compliance. It involves implementing security practices, establishing incident response and business continuity policies, and providing oversight and accountability mechanisms. Effective cybersecurity governance allocates resources to cybersecurity initiatives, implements risk management processes, and sets the tone for an organisation's cybersecurity posture.

NEC's Solution

NEC offers robust and modern cybersecurity services that encompass proactive management and vigilant monitoring of the organisation's security events and logs. NEC's comprehensive services utilise cutting-edge technology to effectively collect, analyse, and correlate security events from both cloud and on-premises data sources.

Operational round-the-clock, NEC's Advanced Response Centre (ARC) ensures uninterrupted monitoring and rapid response to suspicious activities and/or events. The ARC takes full responsibility of managing the infrastructure, implementing updates, and performing maintenance tasks to ensure optimal performance. NEC's team of highly skilled SOC analysts diligently scrutinises the accumulated security data. Through their expertise, any security incidents are swiftly detected and resolved in accordance with a meticulously crafted incident response plan.

Why Choose NEC Managed Services?
