AirDroid Business | AI-Native Device Operation Platform

Manage 10,000 devices as easily as 100 with AI

Detect incidents before users report them, automate routine operations, and standardize best practices with reusable workflows. AirDroid Business helps IT teams proactively manage Android device fleets at scale.

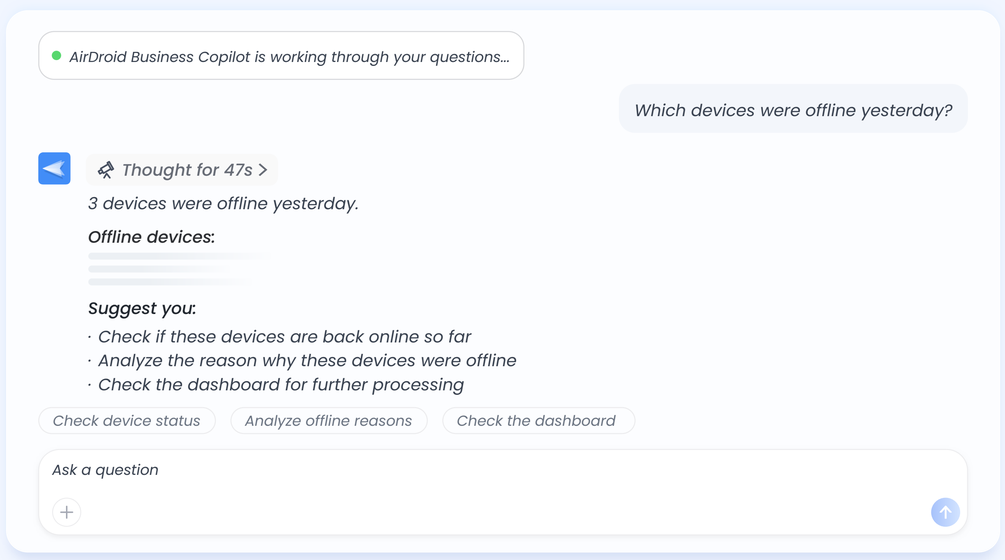

Detect and Resolve Issues Automatically

Deploy AI agents that continuously monitor device health, investigate issues, execute pre-approved remediation actions, and escalate incidents to your team when human intervention is required.

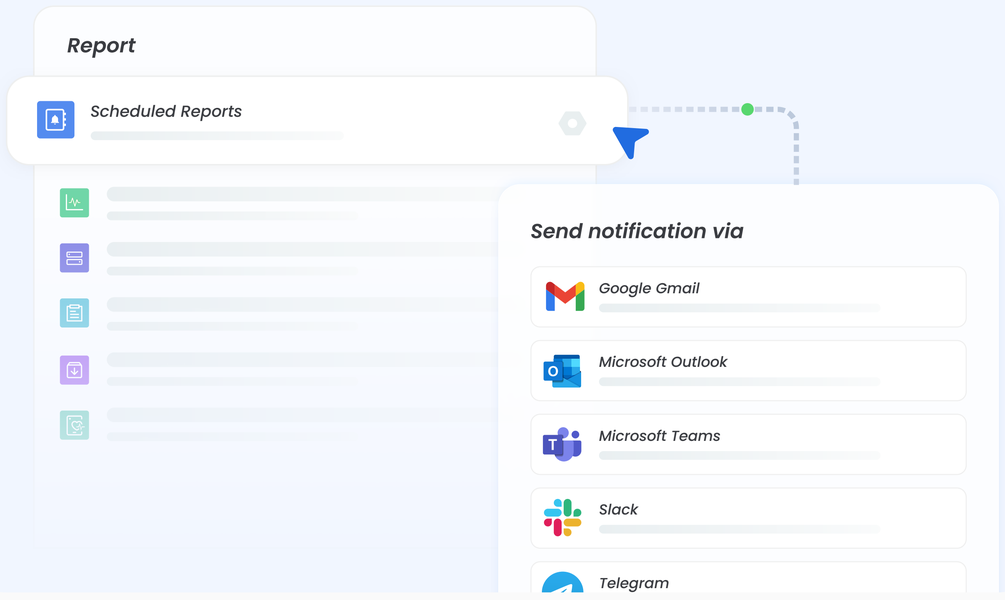

Ask Copilot, Get Answers, and Take Action

Talk to AirDroid Business Copilot in natural language to transform first-line support with AI. Check device status, enroll and group your devices, troubleshoot issues, and execute procedures based on your SOP and real-time device data.

Tailor Device Reporting Services

Turn reporting and customer communication into scalable managed services. Automatically deliver tailored reports, customer-ready updates, and incident summaries that improve customer experience at scale.

Make device operation controlled and transparent

Dashboard

Monitor AI token usage and adoption across organizations, and provide a comprehensive audit log for device management.

Human-in-the-loop

Trigger interactive forms or pause & resume nodes when human approval is required for high-risk actions.

Collaboration Workspace

Humans, AI, and workflows manage devices together with a shared context, turning words into operational actions via chat.

About Sand Studio

Founded in 2011, Sand Studio is a global technology and AI company focused on connectivity, management, and automation. Today, we help organizations connect people, devices, systems, workflows, and AI.
AirDroid Business is our enterprise device management and endpoint operations platform, helping IT teams manage distributed devices with greater visibility, stronger control, and lower operational costs.
